Abstract Our research is related to the projective space over the finite field. The aim of this paper is to construct new arcs of various degrees in the three-dimensional projective space over the Galois field of order $2,3,4,5$. In $P G(3, q), q=2,3,4$ and 5 , an arc of degree $n$ and order $k+1, k+2$ has found from incomplete $(k ; n)-\operatorname{arc}$. Also, two geometrical methods are used to formed $(k+1 ; n)$-arc and $(k+2 ; n)$-arcs from incomplete $(k ; n)$-arc. Many other properties of these arcs are given as $T_{i}$ distributions and $c_{i}$ distributions. The MATLAB programing is used to do all calculations.

## 1 Introduction

A projective 3-space $\operatorname{PG}(3, q)$ over Galois field $G F(q)$, where $q=p^{m}$ for some prime number P and some integer m is a 3-dimensional projective space which consists of points, lines and planes with incidence relation between them. $P G(3, q)$ is satisfying the following axioms:
(a) Any three distinct non-collinear points, also any line and point not on it are contained in a unique plane.
(b) Any two distinct coplanar lines intersect in a unique point.
(c) Any line not on a given plane intersects the plane in a unique point.
(d) Any two distinct planes intersection in a unique line.

Any point in $\operatorname{PG}(3, q)$ has the form of a quadrable $\left(x_{1}, x_{2}, x_{3}, x_{4}\right)$, where $x_{1}, x_{2}, x_{3}, x_{4}$ are elements in $G F(q)$ with the exception of the quadrable consisting of four zero elements. Two quadrables $\left(x_{1}, x_{2}, x_{3}, x_{4}\right)$ and $\left(y_{1}, y_{2}, y_{3}, y_{4}\right)$ represent the same point if there exists $\lambda$ in $G F(q) \backslash\{0\}$ such that $\left(x_{1}, x_{2}, x_{3}, x_{4}\right)=\lambda\left(y_{1}, y_{2}, y_{3}, y_{4}\right)$, Similarly, any plane in $P G(3, q)$ has the form of a quadrable $\left[x_{1}, x_{2}, x_{3}, x_{4}\right]$, where $x_{1}, x_{2}, x_{3}, x_{4}$ are elements in $G F(q)$ with the exception of the quadrable consisting of four zero elements.

Two quadrables $\left[x_{1}, x_{2}, x_{3}, x_{4}\right]$ and $\left[y_{1}, y_{2}, y_{3}, y_{4}\right]$ represent the same plane if there exists $\lambda$ in $G F(q) \backslash\{0\}$ such that $\left[x_{1}, x_{2}, x_{3}, x_{4}\right]=\lambda\left[y_{1}, y_{2}, y_{3}, y_{4}\right]$.

A point $P\left(x_{1}, x_{2}, x_{3}, x_{4}\right)$ is incident with the plane $\pi\left[a_{1}, a_{2}, a_{3}, a_{4}\right]$ iff $a_{1} x_{1}+a_{2} x_{2}+a_{3} x_{3}+$ $a_{4} x_{4}=0$. As a historical background, the construct new arcs of various degrees in the twodimensional projective space over the Galois field of order $2,3, \ldots$, etc. are constructed by Hirschfeld [6]-[8].

## 2 Basic Concepts

Definition 2.1. [3],[7] A plane $\pi$ in $P G(3, q)$ is a set of all points $P\left(x_{1}, x_{2}, x_{3}, x_{4}\right)$ satisfying a linear equation $u_{1} x_{1}+u_{2} x_{2}+u_{3} x_{3}+u_{4} x_{4}=0$. This plane is denoted by $\pi\left[u_{1}, u_{2}, u_{3}, u_{4}\right]$, where $x_{1}, x_{2}, x_{3}, x_{4}$ are elements in $G F(q)$ with the exception of the quadrable consisting of four zero elements.
Theorem 2.2. [3],[7] The points of $P G(3, q)$ have unique forms which are $(1,0,0,0),(x, 1,0,0),(x, y, 1,0)$ and $(x, y, z, 1)$ for all $x, y, z$ in $G F(q)$. which are $(1,0,0,0)$ is one point, $(x, 1,0,0)$ are $q$ points, $(x, y, 1,0)$ are $q^{2}$ points, and $(x, y, z, 1)$ are $q^{3}$ points, for all $x, y, z$ in $\operatorname{GF}(3, q)$.

Theorem 2.3. [3],[7] The planes of $P G(3, q)$ have unique forms which are $[1,0,0,0],[x, 1,0,0],[x, y, 1,0]$, $[x, y, z, 1]$ for all $x, y, z$ in $G F(q)$. which are $[1,0,0,0]$ is one plane, $[x, 1,0,0]$ are $q$ planes, $[x, y, 1,0]$ are $q^{2}$ planes, and $[x, y, z, 1]$ are $q^{3}$ planes, for all $x, y, z$ in $\operatorname{GF}(3, q)$.

Theorem 2.4. [3],[7] There exists $q^{3}+q^{2}+q+1$ of points in $P G(3, q)$.
Theorem 2.5. [3],[7] There exist $q^{3}+q^{2}+q+1$ planes in $P G(3, q)$.
Theorem 2.6. [3],[7] Every plane in $\operatorname{PG}(3, q)$ contains exactly $q^{2}+q+1$ points (lines) and every point is on exactly $q^{2}+q+1$ planes.

Theorem 2.7. [3],[7] Every line in $P G(3, q)$ contains exactly $q+1$ points and every point is on exactly $q+1$ lines."

Theorem 2.8. [3],[7] Any two points in $P G(3, q)$ are on exactly $q+1$ planes.
Theorem 2.9. [3],[7] Any two planes in $P G(3, q)$ intersect in exactly $q+1$ points.
Theorem 2.10. [3],[7] there exist $\left(q^{2}+1\right)\left(q^{2}+q+1\right)$ lines in $P G(3, q)$.
Theorem 2.11. [3],[7] Any line in $P G(3, q)$ is on exactly $q+1$ planes.
Definition 2.12. [3],[7] A $(k ; n)$-arcA in $P G(3, q)$ is a set of $k$ points such that at most $n$ points of which lie in any plane, $n \geq 3$. n is called degree of the $(k ; n)$-arc.

Definition 2.13. [3],[7] In $P G(3, q)$ if $k$ is any $k$-set, then an n-secant of $k$ is a line (a plane) $\ell$ such that $|\ell \cap k|=n$. A 0 -secant is called an external line (plane) of $k$, a 1 -secant is called a unisecant line (plane), a 2 -secant is called a bisecant line and 3 -secant is called a trisecant line.

Definition 2.14. [8] Let $T_{i}$ be the total number of the i-secants of a $(k ; n)$-arc A, then the type of A denoted by $\left(T_{n}, T_{n-1}, T_{n-2}, \ldots, T_{0}\right)$.

Definition 2.15. [8] A point $R$ not on a $(k ; n)$-arc A has index $i$ if there exists exactly $i$ ( $n$ secant) of A through $R$, one can denoted the number of points $R$ of index $i$ by $c_{i}$.

It is concluded that the $(k ; n)$-arc set is complete iff $c_{0}=0$. Thus the $k$-set is complete iff every points of $P G(3, q)$ lies on som $n$-secant of the $(k ; n)$-set.

Definition 2.16. [8] $(k ; n)$-arc A is complete if it is not contained in $(k+1 ; n)$-arc.
Remark 2.17. [8] A $(k ; n)$-arc is complete iff $c_{0}=0$, in other words the $(k ; n)$-arc is complete iff every point of $\operatorname{PG}(3, q)$ lies on some $n$-secant of the $(k ; n)$-arc.

Theorem 2.18. [8] Let $c_{i}$ be the number of points of index $i$ in $P G(3, q)$ which are not on a $(k ; n)$-arc $A$, then the constants $c_{i}$ of $A$ satisfy the following equations:
(i) $\sum_{\alpha}^{\beta} c_{i}=q^{3}+q^{2}+q+1-k$.
(ii) $\sum_{\alpha}^{\beta} i c_{i}=\frac{k(k-1) \ldots .(k-n+1)}{n!}+\left(q^{2}+q+1-n\right)$
where $\alpha$ is the smallest $i$ for which $c_{i} \neq 0, \beta$ be the largest $i$ for which $c_{i} \neq 0$.
Theorem 2.19. [8] Let $t(p)$ represents the number of unsecants (planes) through a point $P$ of $a(k ; n)$-arc $A$ in $P G(3, q)$, and let $T_{i}$ represent the numbers of $i$-secants (planes)for the arc $A$, then:
(i) $t=t(p)=q^{2}+q+2-k-\frac{(k-1)(k-2)}{2}-\cdots-\frac{(k-1)(k-2) \ldots .(k-n+1)}{(n-1)!}$
(ii) $T_{1}=k t$
(iii) $T_{2}=\frac{k(k-1)}{2}$
(iv) $T_{3}=\frac{k(k-1)(k-2)}{3!}$
(v) $T_{n}=\frac{k(k-1) \ldots . .(k-n+1)}{n!}$
(vi) $T_{0}=q^{3}+q^{2}+q+1-k t-\frac{k(k-1)}{2}-\frac{k(k-1)(k-2)}{3!}-\cdots-\frac{k(k-1)(k-2) \cdots(k-n+1)}{n!}$.

## 3 The construction $(k+1 ; n)$-arcs from incomplete $(k, n)$-arc

We can construct $(k+1 ; n)$-arcs from any incomplete arc with the same dgree as follows:
(i) we define the $(k ; n)$-arc points in the table of points and planes for $\operatorname{PG}(3, q)$.
(ii) we delete all points which lie in n-secant from the projective space $\operatorname{PG}(3, q)$.
(iii) we add in each time 1 point of the remaining points to $(k ; n)$-arc to obtain $(k+1 ; n)$ - arcs.

To illustrate this method, we take the following examples:

### 3.1 Construction (8;5)-arcs from incomplete (7,5)-arc in PG(3,2)

A projective space $P G(3,2)$ over Galois field $G F(2)$ contains 15 points and 15 planes, each plane contain 7 points and every 2 planes intersct in three points. since a $(k ; n)$-arc is a set of $k$ points there is no $n+1$ of them are coplener, we can construct arc by choosing a set of $k$ points such that there are no $n+1$ of them in the same plane for example let $\bar{A}=\{1,2,3,4,5,6,13\}$ is a $(7,5)$-arc, now we define points of $\bar{A}$ on the table 1 .

We cancel out the points which lie in 5-secant from the space which are 9,11 . now we add on each time one point from the remaining poins to the $(7 ; 5)-\operatorname{arc} \bar{A}$, we get the following incomplete (8;5)-arc:

$$
\begin{aligned}
\bar{A}_{i}: \bar{A}_{1} & =\{1,2,3,4,5,6,7,13\}, & \bar{A}_{2}=\{1,2,3,4,5,6,8,13\}, \bar{A}_{3}=\{1,2,3,4,5,6,10,13\}, \\
\bar{A}_{4} & =\{1,2,3,4,5,6,12,13\}, & \bar{A}_{5}=\{1,2,3,4,5,6,13,14\}, \bar{A}_{6}=\{1,2,3,4,5,6,13,15\} .
\end{aligned}
$$

### 3.2 Construction of (9,5)-arcs from Incomplete (8;5)-arc in PG(3,3)

$P G(3,3)$ consists of 40 points and 40 plane, every points is on exactly 13 planes, every two plane intersect in to four points, so as to constract $(k, n)$-arc in $P G(3,3)$ we choose any set of space points such that lie on n-secant and there is no $n+1$ of them are coplenar for example let $\dot{B}=\{1,2,3,6,9,19,27,33\}$ where $\dot{B}$ incomplete $(8 ; 5)$ - arc, now to construct $(9 ; 5)$-arcs from $\dot{B}$ define points of $\dot{B}$ in table 2 .

Table 2. points and planes in $P G(3,3)$.

| $i$ | Points | Planes |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (1,0,0,0) | 2 | 5 | 8 | 9 | 14 | 17 | 20 | 23 | 26 | 29 | 32 | 35 | 38 |
| 2 | $(0,1,0,0)$ | 1 | 9 | 10 | 11 | 14 | 15 | 16 | 23 | 24 | 25 | 32 | 33 | 34 |
| 3 | (1,1,0,0) | 4 | 7 | 9 | 12 | 14 | 19 | 21 | 23 | 28 | 30 | 32 | 37 | 39 |

| 26 | (0,1,1,1) | 1 | 8 | 12 | 13 | 20 | 21 | 22 | 26 | 27 | 28 | 32 | 33 | 34 |
| 27 | (1,1,1,1) | 4 | 6 | 8 | 11 | 16 | 18 | 20 | 24 | 26 | 31 | 32 | 37 | 39 |
| 28 | (2,1,1,1) | 3 | 7 | 8 | 10 | 15 | 19 | 20 | 25 | 26 | 30 | 32 | 36 | 40 |
| 29 | (0,2,1,1) | 1 | 5 | 6 | 7 | 17 | 18 | 19 | 29 | 30 | 31 | 32 | 33 | 34 |
| 30 | (1,2,1,1) | 3 | 5 | 11 | 12 | 16 | 17 | 21 | 24 | 28 | 29 | 32 | 36 | 40 |
| 31 | (2,2,1,1) | 4 | 5 | 10 | 13 | 15 | 17 | 22 | 25 | 27 | 29 | 32 | 37 | 39 |
| 32 | (0,0,2,1) | 1 | 2 | 3 | 4 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31 |
| 33 | (1,0,2,1) | 2 | 6 | 10 | 12 | 16 | 19 | 22 | 23 | 26 | 29 | 33 | 36 | 39 |
| 34 | (2,0,2,1) | 2 | 7 | 11 | 13 | 15 | 18 | 21 | 23 | 26 | 29 | 34 | 37 | 40 |
| 35 | (0,1,2,1) | 1 | 5 | 6 | 7 | 20 | 21 | 22 | 23 | 24 | 25 | 35 | 36 | 37 |
| 36 | (1,1,2,1) | 4 | 5 | 10 | 13 | 16 | 18 | 20 | 23 | 28 | 30 | 33 | 35 | 40 |
| 37 | (2,1,2,1) | 3 | 5 | 11 | 12 | 15 | 19 | 20 | 23 | 27 | 31 | 34 | 35 | 39 |
| 38 | (0,2,2,1) | 1 | 8 | 12 | 13 | 17 | 18 | 19 | 23 | 24 | 25 | 38 | 39 | 40 |
| 39 | (1,2,2,1) | 3 | 7 | 8 | 10 | 16 | 17 | 21 | 23 | 27 | 31 | 33 | 37 | 38 |
| 40 | (2,2,2,1) | 4 | 6 | 8 | 11 | 15 | 17 | 22 | 23 | 28 | 30 | 34 | 36 | 38 |

We delete all points that lie into 5 -secant from the space and add in each time one point from the remaining points of the space to the $(8 ; 5)-\operatorname{arc} \dot{B}$, the resulting arcs is:

$$
\begin{array}{ll}
\dot{B}_{1}\{1,2,3,6,9,14,19,27,33\}, & \dot{B}_{2}\{1,2,3,6,9,16,19,27,33\}, \dot{B}_{3}\{1,2,3,6,9,17,19,27,33\}, \\
\dot{B}_{4}\{1,2,3,6,9,18,19,27,33\}, & \dot{B}_{5}\{1,2,3,6,9,19,21,27,33\}, \dot{B}_{6}\{1,2,3,6,9,19,22,27,33\}, \\
\dot{B}_{7}\{1,2,3,6,9,19,23,27,33\}, & \dot{B}_{8}\{1,2,3,6,9,19,25,27,33\}, \dot{B}_{9}\{1,2,3,6,9,19,26,27,33\}, \\
\dot{B}_{10}\{1,2,3,6,9,19,27,30,33\}, & \dot{B}_{11}\{1,2,3,6,9,19,27,31,33\}, \dot{B}_{12}\{1,2,3,6,9,19,27,32,33\}, \\
\dot{B}_{13}\{1,2,3,6,9,19,27,33,34\}, & \dot{B}_{14}=1,2,3,6,9,19,27,33,35, \dot{B}_{15}\{1,2,3,6,9,19,27,33,36\}, \\
\dot{B}_{16}\{1,2,3,6,9,19,27,33,39\}, & \dot{B}_{17}\{1,2,3,6,9,19,27,33,40\} .
\end{array}
$$

### 3.3 Construction of (7,4)-arcs

From Incomplete $(6,4)$-arc in $P G(3,4): P G(3,4)$ consist of (85) points and 85 plane, every points is on exactly 21 planes, every two plane intersect in five points, let $\widehat{C}=\{1,2,3,6,22,43\}$ is incomplete (6;4)-arc in $P G(3,4)$, now to construct $(7 ; 4)$-arcs from $\widehat{C}$ define points of $\widehat{C}$ in the following table:

We cancel out all points that lie into 4-secant from the space and add in each time one point from the remaining points of the space to the $(6 ; 4)$-arc ?, we get $(7 ; 4)$ - arcs which are:

$$
\begin{array}{ll}
\hat{C}_{1}=\{1,2,3,6,22,31,43\} . & \hat{C}_{2}=\{1,2,3,6,22,32,43\} . \hat{C}_{3}=\{1,2,3,6,22,33,43\} . \\
\hat{C}_{4}=\{1,2,3,6,22,35,43\} . & \hat{C}_{5}=\{1,2,3,6,22,36,43\} . \hat{C}_{6}=\{1,2,3,6,22,37,43\} . \\
\hat{C}_{7}=\{1,2,3,6,22,43,46\} . & \hat{C}_{8}=\{1,2,3,6,22,43,48\} . \hat{C}_{9}=\{1,2,3,6,22,43,49\} . \\

$$

### 3.4 Construction (8,4)-arcs from Incomplete $(7 ; 4)-\operatorname{arc}$ in $\operatorname{PG}(3,5)$

A projective space $P G(3,5)$ consists of 156 points and 156 planes every plane contains 31 points and every point is on 31 plane, any two planes from this space intersct in five points, we will construct $(8 ; 4)$-arcs from incomplete $(7 ; 4)$-arc.

Let $\dot{D}=\{1,2,7,32,63,100,101\}$ where $\dot{D}$ is an arc in $\operatorname{PG}(3,5)$, the first step define points of $\dot{D}$ in table 4 .

We delete all points that lie on 4 - secant from the projective space, the remaining points of the space are: $12,14,15,16,22,23,24,26,37,39,40,41,42,43,45,46,58,59,60,61,67$, $68,70,71,114,115,116,127,128,129,130,133,134,135,136,152,153,154,155$, add one of the remaining points in each time to incomplete $(14 ; 7)-\operatorname{arc} \dot{D}$, then we get $(15 ; 7)-\operatorname{arc} \dot{D}$, where $i=1,2, \ldots, 40$ :

$$
\begin{array}{ll}
\dot{D}_{1}=\{1,2,7,12,32,63,100,101\}, & \dot{D}_{2}=\{1,2,7,14,32,63,100,101\} \\
\dot{D}_{3}=\{1,2,7,15,32,63,100,101\}, & \dot{D}_{4}=\{1,2,7,16,32,63,100,101\} \\
\dot{D}_{5}=\{1,2,7,22,32,63,100,101\}, & \dot{D}_{6}=\{1,2,7,23,32,63,100,101\}, \\
\dot{D}_{7}=\{1,2,7,24,32,63,100,101\}, & \dot{D}_{8}=\{1,2,7,26,32,63,100,101\}
\end{array}
$$

$$

## 4 The Construction $(K+2, n)$-arcs from $(K, n)$-arc in $P G(3, q)$

There are two methods to construction $(k+2 ; n)$-arcs, which are explained below:

### 4.1 The First Method

construction of $(k+2 ; n)$-arcs directly from incomplete $(k ; n)$-arc as following:
(i) we denote the set of arc points in the table of points and planes for $P G(3, q)$. 2- we delete all points which lie in n-secant from the projective space $\operatorname{PG}(3, q)$.
(ii) we add two points from the remaining points to $(k ; n)$-arc to obtain $(k+2 ; n)$ - arcs provided that the two points do not lie on a plane that contain $(n-1)$-secant.

## A Construction of $\mathbf{( 9 ; 5 )}$-arcs from (7;5)-arc in $P G(3,2)$

Let $\hat{A}=\{1,2,3,4,5,6,13\}$ is a (7;5)-arc in $P G(3,2)$,we can construct $(9 ; 5)$-arcs as follow:
(i) we designate the arc points $\hat{\mathrm{A}}$ in table 3 .
(ii) we delete the points that lie on 5-secant, the remaining points are: $7,8,10,12,14,15$.
(iii) we add two from the remaining points to the arc $\hat{A}$ (provided that the two points do not lie on a plane of type 4 -secant), we obtain $(9 ; 5)$-arcs
$\hat{A}_{1}=\{1,2,3,4,5,6,7,13,15\}, \hat{A}_{2}=\{1,2,3,4,5,6,8,12,13\}, \hat{A}_{3}=\{1,2,3,4,5,6,10,13,14\}$.

## A Construction of (8;4)-arcs from (6;4)-arc in $\boldsymbol{P G}(3,4)$

Let $\hat{A}=\{1,2,3,6,22,43\}$ is a (6;4)-arc in $P G(3,4)$, to construction (8;4)-arc $\hat{A}_{i}$ we follow the following steps:
(i) determine the points of $\operatorname{arc} \hat{\mathrm{A}}$ on the table 3 .
(ii) eliminate the points that lie on 4 -secant.
(iii) adding two of the remaining space points to the arc $\hat{A}$, provided that one of the points does not lie on 3 -secant. we get the following ( $8 ; 4$ )-arcs:

$$
\begin{array}{ll}
1-\hat{A}=\{1,2,3,6,22,31,43,50\} & 2-\hat{A}=\{1,2,3,6,22,31,43,52\} \\
3-\hat{A}=\{1,2,3,6,22,31,43,53\} & 4-\hat{A}=\{1,2,3,6,22,31,43,66\} \\
5-\hat{A}=\{1,2,3,6,22,31,43,69\} & 6-\hat{A}=\{1,2,3,6,22,31,43,82\} \\
7-\hat{A}=\{1,2,3,6,22,31,43,84\} & 8-\hat{A}=\{1,2,3,6,22,32,43,50\} \\
9-\hat{A}=\{1,2,3,6,22,32,43,52\} & 10-\hat{A}=\{1,2,3,6,22,32,43,66\} \\
11-\hat{A}=\{1,2,3,6,22,32,43,67\} & 12-\hat{A}=\{1,2,3,6,22,32,43,82\} \\
13-\hat{A}=\{1,2,3,6,22,32,43,83\} & 14-\hat{A}=\{1,2,3,6,22,32,43,84\} \\
15-\hat{A}=\{1,2,3,6,22,33,43,50\} & 16-\hat{A}=\{1,2,3,6,22,33,43,52\} \\
17-\hat{A}=\{1,2,3,6,22,33,43,53\} & 18-\hat{A}=\{1,2,3,6,22,33,43,66\} \\
19-\hat{A}=\{1,2,3,6,22,33,43,67\} & 20-\hat{A}=\{1,2,3,6,22,33,43,69\} \\
21-\hat{A}=\{1,2,3,6,22,33,43,82\} & 22-\hat{A}=\{1,2,3,6,22,33,43,83\} \\
23-\hat{A}=\{1,2,3,6,22,33,43,84\} & 24-\hat{A}=\{1,2,3,6,22,35,43,46\} \\
25-\hat{A}=\{1,2,3,6,22,35,43,48\} & 26-\hat{A}=\{1,2,3,6,22,35,43,49\} \\
27-\hat{A}=\{1,2,3,6,22,35,43,62\} & 28-\hat{A}=\{1,2,3,6,22,35,43,65\} \\
29-\hat{A}=\{1,2,3,6,22,35,43,78\} & 30-\hat{A}=\{1,2,3,6,22,35,43,80\} \\
51-\hat{A}=\{1,2,3,6,22,36,43,46\} & 32-\hat{A}=\{1,2,3,6,22,36,43,48\} \\
51-\hat{A}=\{1,2,3,6,22,46,43,84\} & 52-\hat{A}=\{1,2,3,6,22,48,43,66\} \\
55-\hat{A}=\{1,2,3,6,22,48,43,83\} & 56-\hat{A}=\{1,2,3,6,22,48,43,84\}
\end{array}
$$

$$
\begin{aligned}
57-\hat{A} & =\{1,2,3,6,22,49,43,66\} \\
59-\hat{A} & =\{1,2,3,6,22,49,43,69\} \\
61-\hat{A} & =\{1,2,3,6,22,49,43,84\} \\
63-\hat{A} & =\{1,2,3,6,22,50,43,65\} \\
65-\hat{A} & =\{1,2,3,6,22,50,43,80\} \\
67-\hat{A} & =\{1,2,3,6,22,52,43,63\} \\
68-\hat{A} & =\{1,2,3,6,22,52,43,65\} \\
70-\hat{A} & =\{1,2,3,6,22,52,43,79\} \\
72-\hat{A} & =\{1,2,3,6,22,53,43,62\} \\
74-\hat{A} & =\{1,2,3,6,22,53,43,65\} \\
76-\hat{A} & =\{1,2,3,6,22,53,43,79\} \\
78-\hat{A} & =\{1,2,3,6,22,63,43,66\} \\
80-\hat{A} & =\{1,2,3,6,22,65,43,66\} \\
82-\hat{A} & =\{1,2,3,6,22,65,43,69\} \\
84-\hat{A} & =\{1,2,3,6,22,66,43,80\} \\
86-\hat{A} & =\{1,2,3,6,22,67,43,80\} \\
88-\hat{A} & =\{1,2,3,6,22,69,43,79\} \\
89-\hat{A} & =\{1,2,3,6,22,78,43,83\} \\
91-\hat{A} & =\{1,2,3,6,22,79,43,82\} \\
93-\hat{A} & =\{1,2,3,6,22,80,43,82\} \\
95-\hat{A} & =\{1,2,3,6,22,80,43,84\} .
\end{aligned}
$$

### 4.2 The Second Method

The second method of construction $(k+2 ; n)$-arcs involves two steps:
(i) construct $(k+1 ; n)$-arcs from $(k ; n)$-arc as in 4.1.
(ii) construct $(k+2 ; n)$-arcs from incomplete $(k+1 ; n)$-arcs, the following example illustrates the construction method.

## Construction (10;5)-arcs from (8;5)-arc in $\operatorname{PG}(3,3)$

Let $\dot{B}=\{1,2,3,6,9,19,27,33\}$. The first step we find ( $9 ; 5$ )-arc as in 3.2 , we get 17 different arcs of type $(9,5)$-arc, we take $(9 ; 5)$-arc $\dot{B}_{1}$ and try to determine the points of $\dot{B}_{1}$ in table 2 and delete whole points lie on 5 - secant from points of $\operatorname{PG}(3,3)$, the last step involves adding 1 point each time from the remaining points to the arc $\dot{B}_{1}$, we get 4 different $(9 ; 5)$-arcs $\dot{B}_{i}$ which are:
$\dot{B}_{1}=\dot{B}_{1} \cup\{26\}=\{1,2,3,6,9,14,19,26,27,33\}$.
$\dot{B}_{2}=\dot{B}_{2} \cup\{30\}=\{1,2,3,6,9,14,19,27,30,33\}$.
$\dot{B}_{3}=\dot{B}_{3} \cup\{34\}=\{1,2,3,6,9,14,19,27,33,34\}$.
$\dot{B}_{4}=\dot{B}_{4} \cup\{39\}=\{1,2,3,6,9,14,19,27,33,39\}$.
In the same way we find the $(10 ; 5)$-arc from the remainder $(9 ; 5)$-arcs $\dot{B}_{i}$ as follows:
From the arc $\dot{B}_{2}=\{1,2,3,6,9,16,19,27,33\}$ we get the following arcs:
$1-\dot{B}_{1}=\{1,2,3,6,9,16,19,25,27,33\}$.
$3-\dot{B}_{3}=\{1,2,3,6,9,16,19,27,31,33\}$.
$5-\dot{B}_{5}=\{1,2,3,6,9,16,19,27,33,34\}$.
$7-\dot{B}_{7}=\{1,2,3,6,9,16,19,27,33,40\}$.
from the $\operatorname{arc} \dot{B}_{3}=\{1,2,3,6,9,17,19,27,33\}$
we obtain
$\dot{B}_{1}=\{1,2,3,6,9,17,19,23,27,33\}$.
$\dot{B}_{3}=\{1,2,3,6,9,17,19,27,33,39\}$.
from the $\operatorname{arc} \dot{B}_{4}=\{1,2,3,6,9,18,19,27,33\}$
we obtain $\dot{B}_{1}=\{1,2,3,6,9,18,19,25,27,33\}$.
from the $\operatorname{arc} \dot{B}_{5}=\{1,2,3,6,9,19,21,27,33\}$
we obtain
$\dot{B}_{1}=\{1,2,3,6,9,19,21,23,27,33\}$
$\dot{B}_{3}=\{1,2,3,6,9,19,21,27,31,33\}$
$\dot{B}_{5}=\{1,2,3,6,9,19,21,27,33,34\}$.
from the arc $\dot{B}_{6}=\{1,2,3,6,9,19,22,27,33\}$
we obtain
$\dot{B}_{1}=\{1,2,3,6,9,19,22,25,27,33\}$
$\dot{B}_{3}=\{1,2,3,6,9,19,22,27,33,34\}$
from the arc $\dot{B}_{7}=\{1,2,3,6,9,19,23,27,33\}$
we obtain
$\dot{B}_{1}=\{1,2,3,6,9,17,19,23,27,33\}$
$\dot{B}_{3}=\{1,2,3,6,9,19,23,27,33,34\}$
from the arc $\dot{B}_{8}=\{1,2,3,6,9,19,25,27,33\}$
we obtain
$\dot{B}_{1}=\{1,2,3,6,9,16,19,25,27,33\}$
$\dot{B}_{3}=\{1,2,3,6,9,18,19,25,27,33\}$
$\dot{B}_{5}=\{1,2,3,6,9,19,25,27,32,33\}$
$\dot{B}_{7}=\{1,2,3,6,9,19,25,27,33,36\}$
from the arc $\dot{B}_{9}=\{1,2,3,6,9,19,26,27,33\}$
we obtain $\dot{B}_{1}=\{1,2,3,6,9,14,19,26,27,33\}$
$\dot{B}_{3}=\{1,2,3,6,9,19,26,27,32,33\}$
$\dot{B}_{5}=\{1,2,3,6,9,19,26,27,33,40\}$
from the $\operatorname{arc} \dot{B}_{10}=\{1,2,3,6,9,19,27,30,33\}$
we obtain
$2-\dot{B}_{2}=\{1,2,3,6,9,16,19,27,30,33\}$.
$4-\dot{B}_{4}=\{1,2,3,6,9,16,19,27,32,33\}$.
$6-\dot{B}_{6}=\{1,2,3,6,9,16,19,27,33,35\}$.

$$
\begin{aligned}
\dot{B}_{2} & =\{1,2,3,6,9,17,19,25,27,33\} . \\
\dot{B}_{4} & =\{1,2,3,6,9,17,19,27,33,40\}
\end{aligned}
$$

$$
\begin{aligned}
\dot{B}_{2} & =\{1,2,3,6,9,19,21,26,27,33\} \\
\dot{B}_{4} & =\{1,2,3,6,9,19,21,27,32,33\}
\end{aligned}
$$

$$
\begin{aligned}
& \dot{B}_{2}=\{1,2,3,6,9,19,22,27,30,33\} \\
& \dot{B}_{4}=\{1,2,3,6,9,19,22,27,33,35\} .
\end{aligned}
$$

$$
\begin{aligned}
\dot{B}_{2} & =\{1,2,3,6,9,19,21,23,27,33\} \\
\dot{B}_{4} & =\{1,2,3,6,9,19,23,27,33,35\}
\end{aligned}
$$

$$
\begin{aligned}
\dot{B}_{2} & =\{1,2,3,6,9,17,19,25,27,33\} \\

& \dot{B}_{3}=\{1,2,3,6,9,19,23,27,33,35\}
\end{aligned}
$$

$$
\dot{B}_{5}=\{1,2,3,6,9,19,27,31,33,35\}
$$

$$
\text { from }_{15}=\{1,2,3,6,9,19,27,33,36\}
$$

we obtain

$$
\dot{B}_{1}=\{1,2,3,6,9,19,25,27,33,36\}
$$

$$
\text { from } \dot{B}_{16}=\{1,2,3,6,9,19,27,33,39\}
$$

## we obtain

$\dot{B}_{1}=\{1,2,3,6,9,14,19,27,33,39\}$
$\dot{B}_{2}=\{1,2,3,6,9,17,19,27,33,39\}$
$\dot{B}_{3}=\{1,2,3,6,9,19,25,27,33,39\}$
from $\dot{B}_{17}=\{1,2,3,6,9,19,27,33,40\}$
we obtain

| $\dot{B}_{1}=\{1,2,3,6,9,16,19,27,33,40\}$ | $\dot{B}_{2}=\{1,2,3,6,9,17,19,27,33,40\}$ |
| :--- | :--- |
| $\dot{B}_{3}=\{1,2,3,6,9,19,26,27,33,40\}$ | $\dot{B}_{4}=\{1,2,3,6,9,19,27,30,33,40\}$ |

## 5 Conclusions

(i) $(k+1 ; n)$-arcs can only be constructed from incomplete $(k ; n)$-arc.
(ii) $(k+1 ; n)$-arcs can be complete or incomplete.
(iii) number of $(k+1 ; n)$-arcs that can be constructed from $(k ; n)$-arc is equal $q^{3}+q^{2}+q+1-$ $(|k|+L)$. Where $|k|=$ number of points $k, L=$ number of points that lie on $n$-secant.
(iv) in the second method of construction $(k+2 ; n)$-arcs from $(k+1 ; n)$-arc, $(k ; n)$-arc and $(k+1 ; n)$-arc must be incomplete.

## Acknowledgment

The authors would like to thanks the University of Mosul, Department of Mathematics in the College of Education for Pure Science for their motivation, support and for providing us with an appropriate research atmosphere.
